Ransomware Protection as a Service™ for Manufacturing

InterVision
intervision.com/rpaas-mfg

From the factory floor to the C-Suite, manufacturers lead the way when it comes to using technology to transform business. Yet, these investments can make the organization highly vulnerable to cyberthreats like ransomware. Attackers know they can shut the business down with one well-placed phishing email or downloadable malware. InterVision's Ransomware Protection as a Service™ (RPaaS™) combines 24x7x365 security operations and strategic guidance with immutable backups and managed disaster recovery for the most comprehensive ransomware protection solution available today.

Never Pay a Ransom with True End-to-End Protection

As the industry's most comprehensive managed service for ransomware protection, InterVision's RPaaS gives you peace of mind that you have everything in place to proactively repel threats and never have to pay a ransom.

Protect Your Business
Through a holistic protection, detection, and recovery solution

Avoid Ransom Costs
With immutable data replication and recovery in a secured cloud landing zone
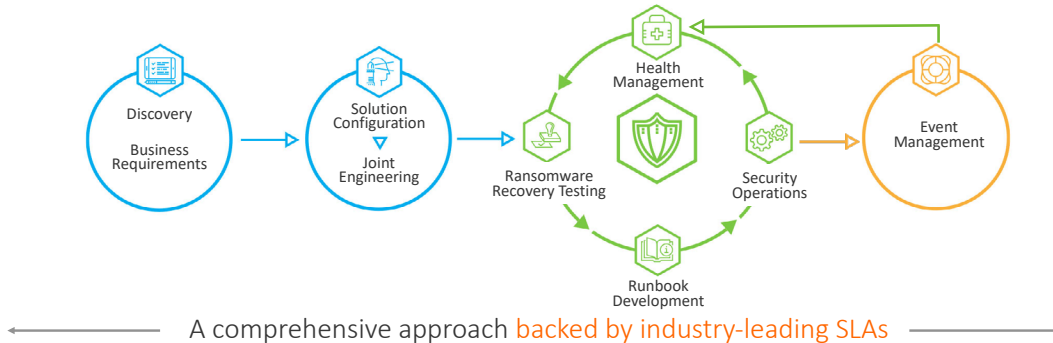

Simplify Operations
With a single "as-a-service" solution backed by dedicated security and recovery experts

Ransomware Protection Assurance Process

InterVision's RPaaS delivers end-to-end cyber attack protection by layering hardened endpoint protection and SIEM to prevent attacks with immutable backups and secured cloud recovery to fully restore data and operations in the rare event of a breach. Your solution is fully supported by certified security and disaster recovery experts to monitor and respond 24x7x365.

Discovery / Business Requirements → Solution Configuration / Joint Engineering → Ransomware Recovery Testing → Health Management → Security Operations → Runbook Development → Event Management

A comprehensive approach backed by industry-leading SLAs

Why InterVision's RPaaS?

The Most Comprehensive Approach Available
No other solutions delivers protection, response, and recovery from cyber threats in a single managed service

Backed by Industry-Leading SLAs & Insurance
Guaranteed response and recovery to meet your unique objectives – backed by 4X industry average insurance coverage

A Trusted Leader in Data Recovery
InterVision's resiliency solutions have been recognized as leaders by industry analysts (Forrester & Gartner) and 5-star client satisfaction scores

The business impact of a ransomware infection can be catastrophic with an average cost of $3.6 million plus loss of productivity, service disruption and reputational damage. Now is the time to connect with an InterVision cybersecurity expert to make sure you have the protection you need.

Don't leave you or your organization vulnerable.

Service Details
Ransomware Protection as a Service (RPaaS) aligns to the NIST Cybersecurity framework to fully address all protection, detection, and recovery aspects to meet the evolving threat of ransomware.

IDENTIFY	PROTECT	DETECT	RESPOND	RECOVER

Ransomware Protection as a Service (RPaaS)
People, process and technology to deliver true end-to-end cyber threat protection

SOCaaS (Contains EDR + SIEM)
Monitoring and warning of threat activity to stop attacks before they happen

Ransomware Recovery as a Service (Contains DRaaS + BaaS)
Managed replication and recovery process to ensure rapid recovery from any service disruption

vCISO (Security Posture and Advice)
Ongoing advisory and assistance to support the maturation of security process and ongoing business risk mitigation

Protection & Detection with SOCaaS (Security Operations as a Service)
InterVision's expert SOC team monitors threat activity 24x7x365 to stop attacks before they happen. This experienced, dedicated team identifies and contains malicious activity by leveraging endpoint, SIEM, and other leading-edge prevention technologies.

Ransomware Recovery as a Service (DRaaS & BaaS)
InterVision's managed resiliency process ensures rapid recovery from service disruptions, with trained personnel available 24x7x365 to ensure operation rollover to a secured, scalable cloud environment. Our recovery services combine industry best practices such as air gapping, multi-factor authentication (MFA) and immutable backups with a relentless commitment to testing and documentation.

vCISO (virtual Chief Information Security Officer) Services
An InterVision vCISO leads your Business Risk Reduction program for RPaaS by helping your team analyze, advise, and develop important governance policies and processes for your business risk mitigation. During a ransomware event declaration, your vCISO will also oversee your response strategy execution.

Rest Assured with Ironclad SLAs
In addition to aligning with NIST Cybersecurity Framework, InterVision boosts your confidence by backing its RPaaS solution with a set of service level agreements that guarantee service uptime, incident response, and most-importantly, recovery time.
