

Continuous Penetration Testing for Real-Time Threat Detection

With ransomware attacks on the rise, costing organizations millions annually, traditional penetration testing no longer meets today's security demands. InterVision's Penetration Testing as a Service (PTaaS) provides continuous assessments, real-time updates, and comprehensive ransomware defense, closing security gaps and proactively responding to emerging threats.

Uncover Gaps & Strengthen Defenses with PTaaS

RedSpy³⁶⁵® with Agger Labs integration offers proactive penetration testing, powered by InterVision's expertise, delivering continuous security improvements through **real-time insights, advanced threat detection, and expert-managed services.**

Key Benefits and Differentiators:

- **Proactive Threat Identification:** Continuous, AI-powered testing quickly mitigates new vulnerabilities
- **Comprehensive Ransomware Protection:** Protects against all strains, including zero-day threats, with advanced kernel-level defense
- **Streamlined Security Integration:** Seamlessly integrates with existing and legacy systems for smooth operation
- **Continuous Data-Driven Risk Analysis:** Delivers real-time, actionable insights via interactive dashboards
- **Strengthened Cybersecurity Posture:** Managed services provide proactive remediation and ongoing defense improvements
- **Optimized Visibility and Prioritization:** Aligns asset risks to business processes for focused protection

From Detection to Remediation: Complete Risk Management

At InterVision, we guide you from detection to remediation, combining advanced tools, automated bots, and expert insights to effectively identify and mitigate threats.

Test: Detect risks through scanning and phishing simulations

Identify: Demonstrate the impact of risks by exploiting vulnerabilities

Report: Deliver actionable solutions with clear remediation steps

The InterVision Difference in the Fight against Ransomware

With over a decade of R&D and deep expertise across industries, InterVision's PTaaS provides the most comprehensive, proactive approach to penetration testing.
