From Critical Cyberattack to Complete Resolution in an Hour

Cyberattacks strike when least expected, wreaking havoc and potentially costing organizations millions in lost revenue, trust, and recovery efforts.

Such was the case for one of InterVision's customers that found its operations at a critical standstill due to a severe cyber assault. But what could have been a devastating blow lasting days or weeks, with exorbitant costs in both time and money, was swiftly mitigated, thanks to InterVision's expert intervention and comprehensive services.

Fortification: Building a Resilient Future

In the aftermath of the incident, InterVision worked closely with the customer to review and strengthen their security posture. By implementing geofencing for firewalls and blocking PowerShell via Group Policy Objects (GPO), the environment was reinforced against future attacks—a testament to InterVision's commitment to not just recovery, but prevention via Managed Innovation.

Outcome: A Success Story in Rapid Recovery

This incident underscores a remarkable journey from attack to recovery—**completed in an impressive 67 minutes.** InterVision delivered a comprehensive recovery package: from detecting and mitigating against the initial breach, responding robustly to restore business operations, and advising on best practices to adapt security measures for future resilience.

In an era where cyber threats loom large, this success story illustrates the targeted expertise and reliability of InterVision's cybersecurity solutions.

How quickly can your organization recover from a cyberattack? Reach out to InterVision today to begin your journey in strengthening cybersecurity resilience.

The Incident: A Timeline of Managed Services Success in Action

5:23 AM
Customer IT systems are breached, triggering multiple unauthorized logins. Within minutes, the attack escalates, threatening sensitive data and business continuity.

5:28 AM
InterVision's Security Operations Center as a Service (SOCaaS) team swiftly detects the breach. They immediately escalate to a dedicated 24/7 triage team, setting the wheels of recovery in motion.

5:35 AM
An InterVision Virtual Chief Information Security Officer (vCISO) is in direct communication with the customer, alongside legal and insurance advisors, facilitating a strategic response.

5:48 AM
InterVision Triage Team delivers detailed analysis and clear remediation recommendations. This rapid mobilization is crucial in containing the threat and providing unmatched visibility to the customer in a moment of crisis.

6:13 AM
InterVision SOCaaS team successfully identifies and isolates an infected server, severing its network connection to prevent further damage.

6:20 AM
The InterVision team follows the decisive action to isolate the breached server with a comprehensive managed password reset strategy and data recovery process.

Within 10 minutes, 40TB of compromised data—critical to customer operations—is restored from an immutable repository to a secure pre-incident state.

6:30 AM
The integrity of recovered data is verified, and the customer's IT infrastructure systems are fully operational once again.
